

LogVeil — Architecture

v1.0 · 6 September 2026 · PUBLIC

LogVeil, from Zindagi Technologies, runs entirely inside the customer's own network, as an offline kit in the customer's own virtual machines. One thing leaves the network — the sanitised bundle with its Sanitisation Attestation, after verification, under the customer's own release decision — and nothing else does. The key and the map never leave the deployment; the verify tool runs outside the server, on any machine.

Drawn by code from the product's specification; not a screen.

LogVeil is in development. An early-access programme opens after our first field trial. To talk to us: sales@zindagi.tech or **+91 97739 73971**.
